

# Liquid Leakage Alarm System

AQUTEK Liquid Leakage Alarm System is widely used for Under-floor Air Conditioning Units, Over-head Fan Coil Units, Hot Water Radiator Units, Sump Tanks, Drip Trays, etc.

Zone-Type Liquid Leakage Alarm System can be used with Water Sensing Cable or Spot Type Water Leakage Detector to detect the presence of water on a horizontal surface. Users are informed whenever a water leak is detected, ensuring water leak in remote sites never turns into a disaster.

## ZD-18 Zone-Type Liquid Leakage Alarm System

- Local Indicators
- 2 Relay Outputs
- Safe Operations
- Simple and User Friendly

## ALC-M-5M Modular Leader Cable, 5m

Used for Connection between Water Sensing Cable and Wire Terminal of the Water Leak Detection System.

## WSC-100-M-5M/10M/15M Modular Water Sensing Cable, 5m/10m/15m

Using Single or Multiple Water Sensing Cable can expand the capabilities of Water Leak Detection. 5m, 10m and 15m Water Sensing Cable is available.

## WSC-100-E-5M Modular Water Sensing Cable with End Termination, 5m

Used for Water Leak Detection, needed at the end of each water leak detection circuit.

## SD-16 Spot Type Water Leakage Detector

Multiple detectors can be connected in series to detect the presence of water on a horizontal surface.

## SD-15-DC Standalone Spot Type Water Leakage Detector

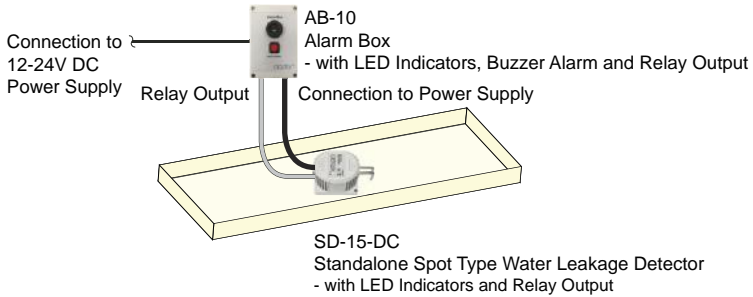

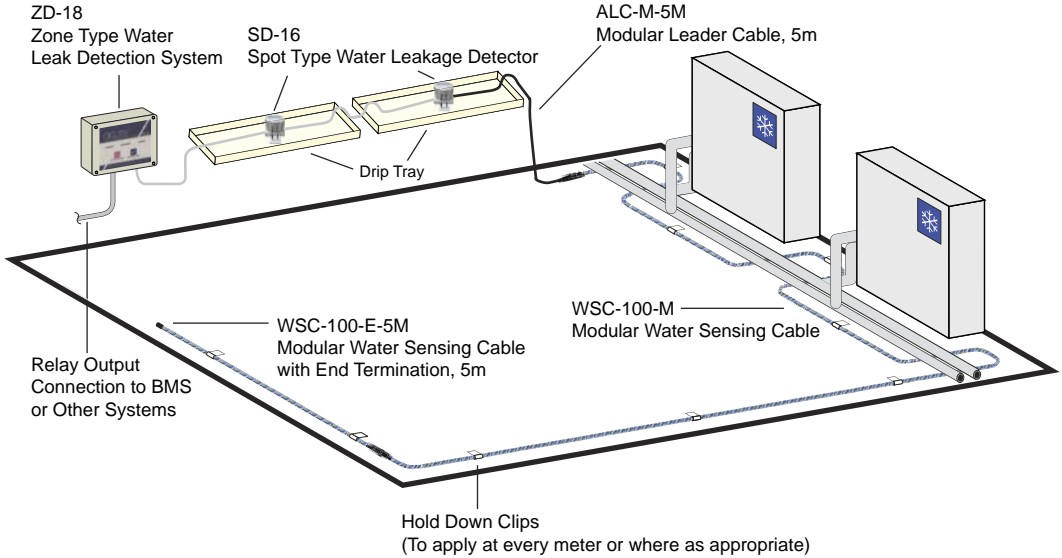

Can be used standalone to detect the presence of water on a horizontal surface, with LED Indicators and Relay Output.

## AB-10 Alarm Box

It can be connected with many other devices as a Local Alarm via LED Indicators and Buzzer Alarm.
